

Vitroform+

The revolutionary air spacer from Allmetal GmbH

Fresh NEW Innovations
Effortless + Inspired + Allmetal

Big savings with Vitroform+

The Vitroform+ was engineered for maximum performance. Its patented profile design—with built-in versatility—is completely unique in the industry and provides major savings to glass manufacturers.

- One profile available in a Hi Q steel reduces tooling and handling costs
- Superior thermal performance vs. aluminum equivalents
- Profile shape contains a butyl reservoir, thus, making your unit safer and stronger

The Vitroform+ offers an enlarged butyl cross-section of 4.5mm. The profile design provides control of the butyl flow during the pressing process.

Top Version (with integrated butyl seal)

- Profile joint is automatically sealed by deep butyl inject
- Diffusion test values equal those of a continuous profile without joint
- Butyl sealant in the protected chamber is injected under high pressure in the smallest cavities

Standard Version (for general use)

- Profile joint is automatically embedded into the sealant during sealing process
- Deep connection drawing assures a reliable joint and tight fit
- Eliminates gaps caused by lineal pull

The revolutionary air spacer from Allmetal GmbH

Quality you can count on

Vitroform+ has passed the rigorous Standard prEN 1279 2/3 test in Europe. Therefore, it is ideal for applications that are required to perform in harsh conditions

- Perfect for laminated safety glass
- Ideal for tempered glass applications
- Excellent compensation for pane movement caused by differences in pressure

The flexibility of Vitroform+ doesn't stop with its design. Vitroform+ can be used with any insulated glass sealants.
